

Ultra-High Reliability Zefr™ Memory

Eliminating Over 90% of Memory Failures: Making the Best, Better

The Zefr Memory Process transforms Tier-1 RDIMMs that already met the industry's typical defect rate of 3,000 parts per million into the most reliable memory for the most demanding applications. Zefr Memory is processed to real-world conditions to eliminate over 90% of remaining memory reliability failures, lowering DPPM to under 200.

Minimize Downtime, Maximize ROI

Downtime can cost thousands of dollars and SLA misses. Deploying Registered ZDIMMs (Zefr Dual Inline Memory Modules) accelerates Platform Bring Up, Maximizes HPV Yield Rate, Accelerates Time-to-Insight, and Lowers Maintenance Costs.

SMART Delivers

SMART has been at the forefront of memory since 1989. Over 30 years of device and system expertise enable us to imagine and deliver breakthroughs like ZDIMMs that a changing application demands.

ZDIMMs are ZeFr-processed Registered DDR4 and DDR5 SDRAM DIMMs with <200 DPPM.
